

Owning CH equipment is a total advantage

Precise spray pattern

Our Quadraflow® spray tips provide a tight pattern with just enough feathering to provide a flawless finish. Our proprietary manufacturing process ensures a high-precision cut in the spray tip to consistently deliver less clogging, longer life and a more precise pattern than other tips on the market.

PowerFlush™ system

The CH PowerFlush™ suction assembly allows you to quickly and completely clean the rig onsite. Simply attach the flow valve to a water hose then connect to the PowerFlush body...it's as close as you can get to a self-cleaning spray rig!

No mess filter

The filter location in the CH PowerFlush™ suction assembly allows quick, easy access for cleaning and checking. Remove the cap and spacer for the easiest suction filter access on the market.

features boost
your productivity*

No Spill Tilt

The PS6521 features an innovative design in bucket management. The spill-reducing bucket leveler keeps the bucket from tipping and swaying so you can easily move around the jobsite.
